Monumat Entrance Matting

The Monumat brand of Entrance Matting Systems is a unique range that combines up-to-date design and aesthetics with the ability to suit the most demanding environments. Walmay has become an industry specialist with intimate knowledge of the requirements for the marketplace whilst providing optimum performance, every time.

The Monumat Range was pioneered in 1999 and has been installed into many prestigious building entrances ever since whilst being fully backed by a 15 Year Written Warranty.

Walmay recognises the need for Entrance Matting to enable safe and easy access at all times for all people without discrimination. To that end, strict measures are taken to ensure that products within the Monumat Range are fully compliant.

Therefore, Monumats are specified and used with confidence internationally.

Manufactured in Australia to standard and custom shapes including; curves, circular, semicircular and irregular designs, there is something to suit every entrance!

Typical Installations Include:

- Corporate & Commercial office buildings
- Shopping Plazas
- Airports
- Schools, Colleges & Universities
- Hospitals & Aged Care Facilities
- Public Domains – Libraries etc

Monumat Entrance Matting

PROFILES FINISHES & INSERTS

Choose your Profile

ALPHA 1

This profile utilises an aluminium tread rail with ball and socket hinge system for superior strength. Designed to retain 31mm insert and rubber backed for quieter transition. This makes it an ideal profile for use in educational facilities, commercial buildings and retail outlets.

See page 8

ALPHA 2

This profile utilises an aluminium tread rail with a flexible rubber joiner. The rubber joiner can be punched with specially placed holes to assist in the drainage of the mat well area. Designed to retain 31mm insert with various options available. An ideal profile for use in educational facilities, commercial buildings and retail outlets where water drainage is a priority.

See page 10

MAXI 1

This profile utilises an aluminium tread rail with ball and socket hinge system for superior strength. Designed to retain 60mm insert which allows for a smoother crossing of wheeled traffic such as walking aids, health care beds and trolleys. This profile is also rubber backed for a quieter transition. Ideal for healthcare facilities or areas with a high volume of wheeled traffic.

See page 12

MAXI 2

This profile utilises an aluminium tread rail with flexible rubber joiner. Designed to retain 60mm insert which allows for a smoother crossing for wheeled traffic such as walking aids, health care beds and trolleys. The rubber joiner can be punched with holes at 60mm or 120mm centres to assist in the drainage of the mat well area. Ideal for healthcare facilities or areas with a high volume of wheeled traffic that requires particular attention to drainage.

See page 14

BOLD 1

This profile utilises an aluminium tread rail and a combination of both Alpha and Maxi profiles providing a greater scope for colour matching and insert options. Ideal for locations that require a high emphasis on aesthetic coordination with the surrounding décor.

See page 16

EURO

This profile utilises an aluminium tread rail with flexible rubber joiner similar to the Alpha 2 profile. However it has a wider tread rail and narrower insert than other profiles making it more cost effective. Therefore this is an ideal profile for budget solutions.

See page 18

Choose your Finish

CLEAR ANODISED

A process for producing a translucent film of aluminum oxide which forms an integral part of the aluminum. This creates a very thin coating of immense hardness. Standard anodising is 15-20um (microns).

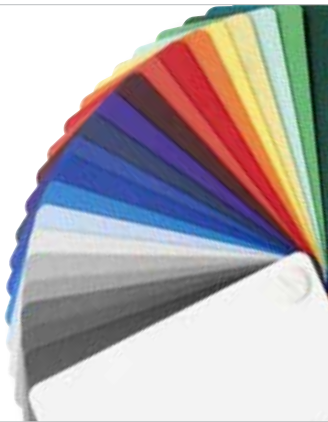

BLACK ANODISED

Follows the same process as clear anodising but the aluminium is immersed into a tank full of dye which absorbs into the pores of the anodised coating until the depth of colour is obtained.

CUSTOM COLOURS

Other colours of anodising available upon request.

Choose your Insert

STEP

Marine grade commercial carpet insert specifically manufactured so it will not harbour mildew or rot whilst removing moisture, grit and grime from footwear. Rubber backed with a high degree of UV protection for heavy duty use and longevity of colour. Suitable for both internal and external applications. Ideal for locations with a large focus on aesthetic value.

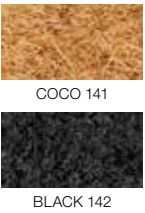

GRIP

Grip is a combination of carborundum grit and epoxy creating a premium product that provides a safe, anti-slip finish. Ideal for locations where slip risk is high.

BRUSH

Brush is a synthetic fibre which is made to imitate natural Coir. The synthetic nature of the insert combined with rubber backing results in a highly durable product. Suitable for both internal and external applications. Ideal for locations that require a natural look and feel or Federation refurbishments.

TRED

Tred is a ribbed aprene (rubber) insert that provides greater capacity and effectiveness in removing larger particles from footwear. Ideal for hard wearing conditions such foot traffic off an unpaved area.

Monumat Entrance Matting **ALPHA 1**

Shown: Monumat Alpha1 with clear anodised finish & Step insert in charcoal 110.

The Monumat Alpha Entrance Matting System has been designed and engineered to provide a solution for every high traffic entrance, giving architectural dominance whilst offering superior protection against the intrusion of moisture, corrosive grit and grime.

FEATURES

- Recessed or surface mounted
- Option of Marine Grade Carpet, Ribbed Aprene, Carborundum Grit or Coir inserts
- 30mm wide inserts
- Heel proof - Closed construction
- Roll up design for ease of care and maintenance
- Full aluminium body and hinge detail for superior structural strength
- Suitable for all high traffic entries

Matwell Systems

Matwell Framing Systems have been created to provide clean divisions between the Entrance Matting and the surrounding floor surface. Walmay's extensive range of accessory profiles have been designed to perform in every application.

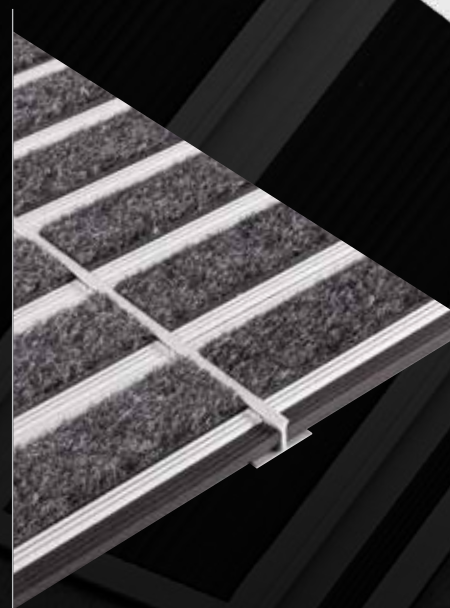

Multi Frame **MF1235**

- Aluminium Matwell Frame suitable for all Monumat Entrance Mats.
- Creates a professional division between floor finish and mat.

Ramp Frame **RF1296**

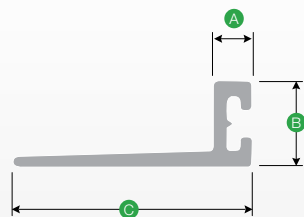

- Aluminium Ramp Profile for surface mounted mats.
- Transition for 12mm Entrance Mats.
- Suitable for wheeled traffic: Walking Aids, Chairs & Trolleys etc.

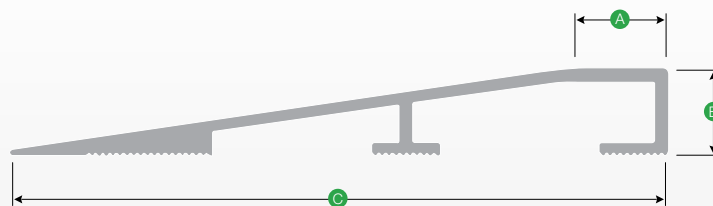

T-Bar Joiner **TB12**

- Aluminium T-Bar dividing profile for joining Entrance Mats in large Matwells.
- Provides Smooth architectural finish to mat intersections.

TYPICAL INSTALLATION METHODS

TYPICAL INSTALLATION METHODS

TYPICAL INSTALLATION METHODS

Operation & Maintenance

A regular and thorough maintenance program for your Entrance Matting is essential to ensure optimal performance. Monumat products are designed to catch and hold dirt particles. Therefore, allowing build-up for long periods of time can restrict pile movement and lead to 'tracking' as the matting is continually trafficked.

Daily

Normal day-to-day soiling must be removed with a vacuum cleaner. A vacuum cleaner with a rotating brush will give the best results, helping to release dirt.

Weekly / Monthly

The matting should be carefully rolled back, section by section, and the base of the matwell thoroughly swept/vacuumed. Any debris caught in between the channels of matting should be removed and then the matting rolled back in to position. Take care not to drag the matting - it is designed to simply roll up and unroll again. Dragging the matting could cause damage.

Closed construction, non-rollable matting should follow the Daily Routine, but in addition aluminium channels with a mild detergent to help free any soiling.

Periodically

The Matting can be carefully removed from the matwell and sprayed with a high pressure water machine. Use of strong cleaning chemicals should be avoided.

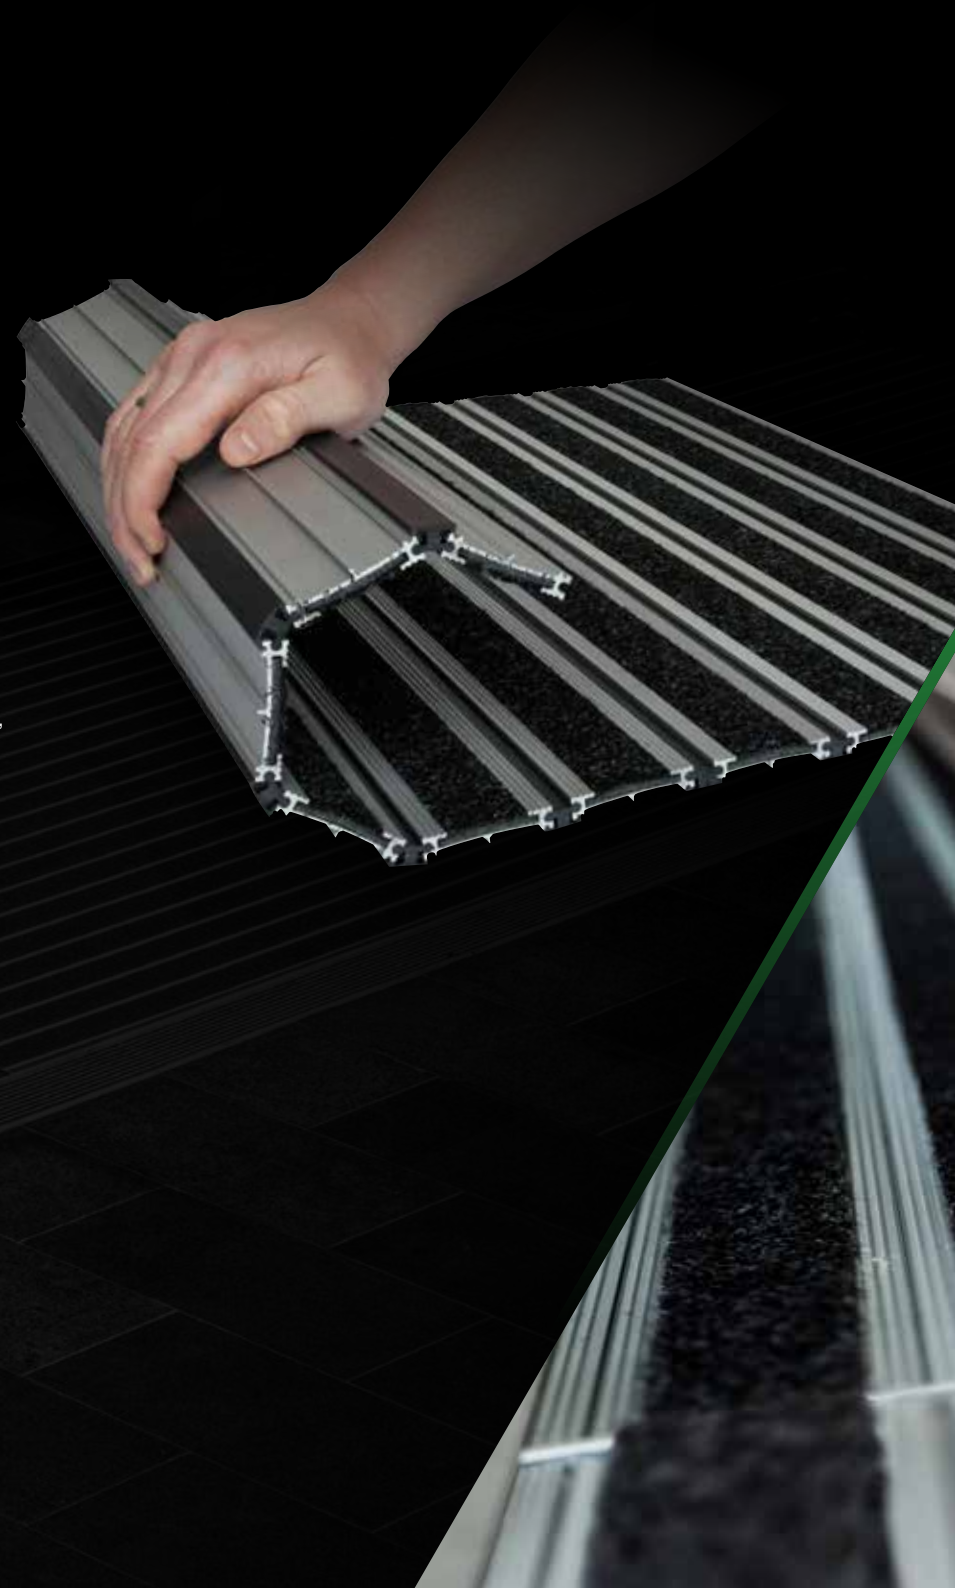

Chewing Gum

Chewing gum must be removed as soon as it appears, by the use of specialist products, such as freezing sprays or gels - failure to remove gum quickly will cause it to become hardened and compacted into the matting surface reducing performance.

Specific Advice

Contact the Walmay team for specific cleaning advice on individual products and in abnormal environments. Full instructions available in Operation and Maintenance manuals.

As with all matting, when subject to heavy wheeled traffic (scissor lifts/pallet trucks etc) it should be suitably protected with plywood boarding.

Market Sectors

Walmay have extensive experience specifying and installing Heavy Duty Entrance Matting in all market sectors, with an impressive portfolio of clients built up over the past 35 years.

With every environment requiring individual attention to detail, experience and market knowledge is paramount to ensure optimum performance, every time.
